Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	**Stage 1: Initial Risk Screening & Data Exploration**	**Stage 2: Clinical Risk Factor Analysis**	**Stage 3: Executive Insight & Care Strategy**
Actions *What does the customer do?*	• Accesses the Health360 Tableau Story landing view. • Filters patient cohort by Age Brackets (Teenager to Old). • Evaluates overall cohort KPIs (5,000 patients, 134 mmHg avg. blood pressure).	• Explores the Clinical Risk Matrix (Glucose vs. BMI scatter plot). • Filters by Risk Tier Categories (High, Moderate, Low Risk). • Analyzes the compound impact of smoking and alcohol consumption.	• Reviews the 4-scene Executive Story walk-through. • Inspects the Symptom Burden Heatmap (fatigue, chest pain, dizziness). • Formulates evidence-based clinical policies and targeted intervention programs.
Touchpoint *What part of the service do they interact with?*	• KPI Summary Cards (01_KPI_Cards). • Age & BMI Highlight Table (02Age_BMI_Distribution). • Primary Condition Bar Charts.	• Scatter Plot Matrix (Glucose vs. BMI by Risk Index). • Grouped Bar Charts (Lifestyle Drivers: Alcohol & Smoking). • Interactive Dynamic Filters.	• Tableau Executive Story Points (Scenes 1 to 4). • Matrix Heatmap Grid (Disease vs. Symptom Burden). • Integrated Web Application (index.html).
Customer Thought *What is the customer thinking?*	• “Are we capturing early-stage hypertension in younger age groups?” • “How evenly distributed are patient records across age brackets?”	• “How strongly do elevated glucose levels and high BMI combine to drive high risk scores?” • “What is the compounding risk multiplier of smoking and alcohol?”	• “Which patient cohorts require immediate preventive lifestyle interventions?” • “How can we allocate health resources to reduce hospital readmission rates?”
Customer Feeling *What is the customer feeling?*	• **Curious:** Eager to discover patterns across patient demographics. • **Concerned:** Noticing elevated blood pressure across all age cohorts.	• **Engaged:** Gaining multi-variable clarity on dynamic clinical risks. • **Focused:** Spotting specific high-risk patient clusters.	• **Empowered:** Armed with data-driven insights for executive policy. • **Confident:** Ready to implement targeted preventive care strategies.

Process Ownership *Who is in the lead on this?*	Primary Care Physician & Health Intake Coordinator	Clinical Risk Manager & Data Analyst	Healthcare Administrator & Chief Medical Officer
Opportunities *How can we improve this stage?*	• Automated alert thresholds for younger patients exhibiting Stage-1 hypertension. • Direct drill-down links to electronic health record (EHR) profiles.	• Integration of predictive machine learning models to forecast 5-year disease risk. • Real-time risk recalculation upon editing patient vital inputs.	• Exportable PDF executive summary reports. • Direct integration into hospital patient management portals via web API.
