Problem-Solution fit canvas 2.0

Health360: Comprehensive Healthcare Risk & Disease Analytics

Date: 28 October 2026 | Team ID: _____

Define CS, fit into CC

1. CUSTOMER SEGMENT(S) — CS

Who is your customer?
i.e. working parents of 0-5 y.o. kids

- Healthcare Administrators & Hospital Executives seeking population-level health trends.
- Clinical Risk Managers & Primary Care Physicians evaluating high-risk patient cohorts.
- Data Analysts & Public Health Researchers evaluating lifestyle impacts on chronic diseases.

6. CUSTOMER CONSTRAINTS — CC

What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices.

- Limited IT budgets preventing expensive enterprise software overhauls.
- Strict data privacy regulations (HIPAA compliance) requiring anonymized patient handling.
- Time constraints on clinicians requiring instant <1.5s visual query responses.

5. AVAILABLE SOLUTIONS — AS

Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking

- Traditional static spreadsheets (Excel/CSV) lacking dynamic multi-variable filtering.
- Monolithic EHR systems with rigid reporting features and high latency.

Explore AS, differentiate

Focus on J&P, tap into BE, understand RC

2. JOBS-TO-BE-DONE / PROBLEMS — J&P

Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.

- Early detection of asymptomatic Stage-1 hypertension baseline across patient cohorts.
- Multi-variable risk assessment connecting lifestyle habits (smoking, alcohol, exercise) to chronic disease onset.
- Optimizing hospital resource allocation based on multi-condition symptom burden heatmaps.

9. PROBLEM ROOT CAUSE — RC

What is the real reason that this problem exists?
What is the back story behind the need to do this job?
i.e. customers have to do it because of the change in regulations.

Data fragmentation across isolated clinical departments preventing a unified 360-degree view of patient risk profiles and lifestyle compounding factors.

7. BEHAVIOUR — BE

What does your customer do to address the problem and get the job done?
i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)

- Clinicians review patient vitals manually during consultations.
- Hospital leaders run monthly retrospective administrative reports rather than real-time monitoring.

Focus on J&P, tap into BE, understand RC

Identify strong TR & EM

3. TRIGGERS — TR

What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news.

- Spikes in patient readmissions due to unmanaged chronic condition complications.
- Institutional mandates for proactive population health management and preventive care protocols.

4. EMOTIONS: BEFORE / AFTER — EM

How do customers feel when they face a problem or a job and afterwards?
i.e. lost, insecure > confident, in control - use it in your communication strategy & design.

- **Before:** Overwhelmed, uncertain, and reactive due to fragmented patient data across disparate EHR systems.
- **After:** Confident, proactive, and in control with real-time interactive visual analytics and risk stratification.

10. YOUR SOLUTION — SL

If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality.
If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.

Health360 Ecosystem: A unified analytics platform integrating 5,000 patient records using Python Pandas ETL, 9 interactive Tableau worksheets, 2 master dashboards, a 4-scene Executive Story, and a lightweight web container deployed over Flask (app.py) via Tableau JS API v2.

8. CHANNELS of BEHAVIOUR — CH

8.1 ONLINE
What kind of actions do customers take online? Extract online channels from #7

Web browser interface accessing embedded Tableau analytics hosted over local Flask server (http://127.0.0.1:5001).

8.2 OFFLINE
What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.

Executive clinical review meetings, printed PDF summary reports, and hospital board presentations.

Extract online & offline CH of BE
